Summary:

Networking and cybersecurity specialist with talents in troubleshooting and critical thinking. I'm flexible in my work, and have a knack for working in large and supportive team environments. Completed my AAS in Networking & Cybersecurity and currently wrapping up my Bachelors in Criminology and Criminal Justice.

Education and Certificates:

Associate of Applied Science in Networking & Cybersecurity GPA) (President's List)	Butler County Community College (3.6
Bachelors in Criminology and Criminal Justice Pennsylvania	Slippery Rock University of
Cyber Defense Pro, Hybrid Server Pro, Network Pro, PC Pro, Security Pro HTB Academy & Labs	CompTIA Testout Labsim Hack The Box

Work Experience:

Information Technology Department (Internship)	Butler County Community College
Studio Mechanic	IATSE 489 (2025 - current)
Private Security Officer - 2025)	St. Moritz Security Services (2023

Skills:

Network Configuration (Command line & GUI)	Vulnerability Assessment (IDS/IPS, Snort, Hardening)	Cloud Infrastructure (Azure, ScoutSuite)	Virtualization (Hypervisor, Virtual Machines)
Firewalls (pfSense, UFW, Suricata)	DHCP/DNS	Windows/MacOs/Linux	Windows Server 2019 (Active Directory, GPO's, DC)

Packet Analyzers (Wireshark, TCP Dump)	Password hashing	VPN configuration (Wireguard)	Honeypots (Pentbox)
Command line, Powershell	Computer scripts	Python	Network segmentation
Change Management	Threat hunting	Systems analysis and design	Business Continuity Planning

Projects:

- Configured an at-home Linux server exclusively via command-line that handles DHCP, DNS, firewalls, NAT, a proxy, a VPN (Wireguard) and has its own NAS. This server services clients in my house, allowing me to monitor clients and network traffic. I'm using UFW for network security and closed unused ports. I can also access the server and in-turn my NAS remotely using a VPN on my cell phone. I also created scripts to assist me in operating the server. This project is stable and robust, and I personally document each step and implement rollbacks if need be. Check out my LinkedIn for more information.
- A solo project at the IT department at BC3 had me setting up an Intel EMA and remotely configuring it for every workstation on campus, allowing remote access to workstations even before booting into their operating system, aiding in troubleshooting.
- I set up a virtual Windows server (2019), and configured an Active Directory for it, DHCP, an internal NIC, and "dummy accounts" that can be used to log into the server by other virtual machines I had on the same PC.
