Summary:

Networking and cybersecurity specialist with talents in troubleshooting and critical thinking. I'm flexible in my work, and have a knack for working in large and supportive team environments. Completed my AAS in Networking & Cybersecurity and currently wrapping up my Bachelors in Criminology and Criminal Justice.

Education and Certificates:

AAS in Networking & Cybersecurity: Butler County Community College (3.6 GPA) (President's List)

Bachelors in Criminology and Criminal Justice(in progress): Slippery Rock University of Pennsylvania

Cyber Defense Pro, Hybrid Server Pro, Network Pro, PC Pro, Security Pro: CompTIA Testout Labsim

HTB Academy & Labs: Hack The Box

Work Experience:

Information Technology Department

Studio Mechanic

Private Security Officer

Butler County Community College (Internship)

IATSE 489 (2025 - current)

St. Moritz Security Services (2023 - 2025)

Skills:

TCP/IP, UDP, DNS, DHCP	Subnetting, CIDR, VLANs, NAT, Routing & Switching	Network segmentation & zero-trust concepts	Wireshark / packet capture analysis
Basic AWS/Azure networking concepts	Cloud security fundamentals	Technical documentation	Troubleshooting & root cause analysis

Firewall configuration (stateful filtering, ACLs)	LAN/WAN troubleshooting	IDS/IPS (Snort, Suricata)	Vulnerability scanning (Nmap, Nessus/OpenVAS)
Endpoint hardening & system hardening	Threat detection & incident response fundamentals	Log analysis & SIEM basics (Splunk, Elastic, Graylog concepts)	Honeypots / deception tech
Security best practices (least privilege, patching, MFA, segmentation)	Linux (Ubuntu, CLI administration, systemd, bash)	Windows Server 2019/2022 (Active Directory, GPO, DHCP, DNS)	Virtualization (VMware, VirtualBox, Hyper-V)
NAS / storage services (Samba, NFS concepts)	VPNs (WireGuard, OpenVPN)	Windows/Mac	Computer scripts/Powershell automation

Projects:

- Solo built and maintained an at-home Linux server (Ubuntu) handling DHCP/DNS, firewalling, VLANs, NAT, and a WireGuard VPN, plus NAS services. Designed for stability with documentation and rollback discipline. The network topology includes my ISP router (upstream link), Linux PC (Server), and Enterprise-level WAP (covers the entire house, AP-mode). VLANs separate the physical network into two separate logical networks. I did this so I could have DHCP/DNS on my linux server and my ISP router without doubling them up. An 8TB NAS handles video recordings from multiple IP cameras I have in my home (baby monitor, outdoor security, etc). A robust VPN allows me to access my server resources (including live-feed from cameras) from anywhere. My firewall (UFW) is simple and secure. I use a zero-trust model and close unused ports. Simple yet reliable scripts aid me in server operation. Current additions under construction include a captive portal for guests.
- A solo project at the IT department at BC3 had me setting up an Intel EMA and remotely configuring it for every workstation on campus, allowing remote access to workstations even before booting into their operating system, aiding in troubleshooting.
- I set up a virtual Windows server (2019), and configured an Active Directory for it, DHCP, an internal NIC, and “dummy accounts” that can be used to log into the server by other virtual machines I had on the same PC.
